

## eDiscovery

### Overview

---

Increasingly more prevalent in modern litigation, eDiscovery can significantly increase litigation costs and provide opposing counsel a potential avenue to create case controversy where none exists. A leader in eDiscovery, Tucker Ellis minimizes potential eDiscovery issues so that our clients can focus on litigating the case. Our eDiscovery Group successfully navigates the eDiscovery landscape for our clients, making the often complicated process of eDiscovery not only manageable, but seamless.

We successfully handle the eDiscovery process in matters of every size – ranging from small cases for privately held businesses to large litigations to complex class action lawsuits and multidistrict litigation involving Fortune 500® companies, including pharmaceutical companies and product manufacturers. We provide the full scope of services for all phases of eDiscovery, with a focus on developing efficient, cost-effective, and defensible eDiscovery plans, including ESI preservation and litigation hold management; identifying and conducting custodial interviews; managing the collection of ESI; drafting, testing, and negotiation of ESI search terms; negotiation of ESI protocols; preparing and managing large-scale document reviews; and coordinating the production of documents.

Our team includes senior attorneys, technology professionals, and experienced staff trained in managing all aspects of our eDiscovery process, which is designed to minimize potential eDiscovery disputes, as well as reduce the scope and costs. We combine our knowledge and resources to counsel clients in the development of economical eDiscovery plans that not only provide a defensible eDiscovery process, but prevent opponents from forcing unreasonable obligations and expense. We also offer eDiscovery training and guidance for our clients.

Actively involved in the eDiscovery community, our team members stay abreast of the latest trends and case law affecting eDiscovery through important participation in The Sedona Conference – Working Group 1, which develops principles, guidance, and best practice recommendations for information governance and electronic discovery in the context of litigation, dispute resolution, and investigations. We frequently write and provide published expert analysis and commentary and speak both locally and nationally on eDiscovery issues. Our team also shares an annual close analysis of the latest in eDiscovery with our “Year in Review,” posted publicly on our website.

### AREAS OF EMPHASIS

- Legal hold and ESI preservation management – notification, identification, and interviews of custodians and identification of ESI for preservation

- Data mapping and coordination of ESI collection for litigation
- Development and negotiation of ESI Protocols and ESI search terms for the efficient, cost-effective and defensible administration of eDiscovery
- Document review – implementation, training, and management
- Document production management
- Assist litigation counsel related to discovery disputes, eDiscovery meet & confer process, and issues related to discovery-on-discovery issues
- Data management and eDiscovery policy development

## **2019 YEAR IN REVIEW**

2019 was a consequential year for eDiscovery developments. Courts throughout the country, both at the state and federal level, analyzed and decided important legal issues that will continue to impact discovery and production for years to come. These cases involve a wide array of topics, from preserving text messages, to carefully crafting objections, to the always-important issue of discovery on discovery. The Tucker Ellis eDiscovery Group has compiled a list of significant and representative eDiscovery cases from 2019 to provide insight and guidance as we study these new developments.
